

# cosmicweb

Online Database for Cosmological Initial Conditions for Zoom-in Simulations

Michael Buehlmann

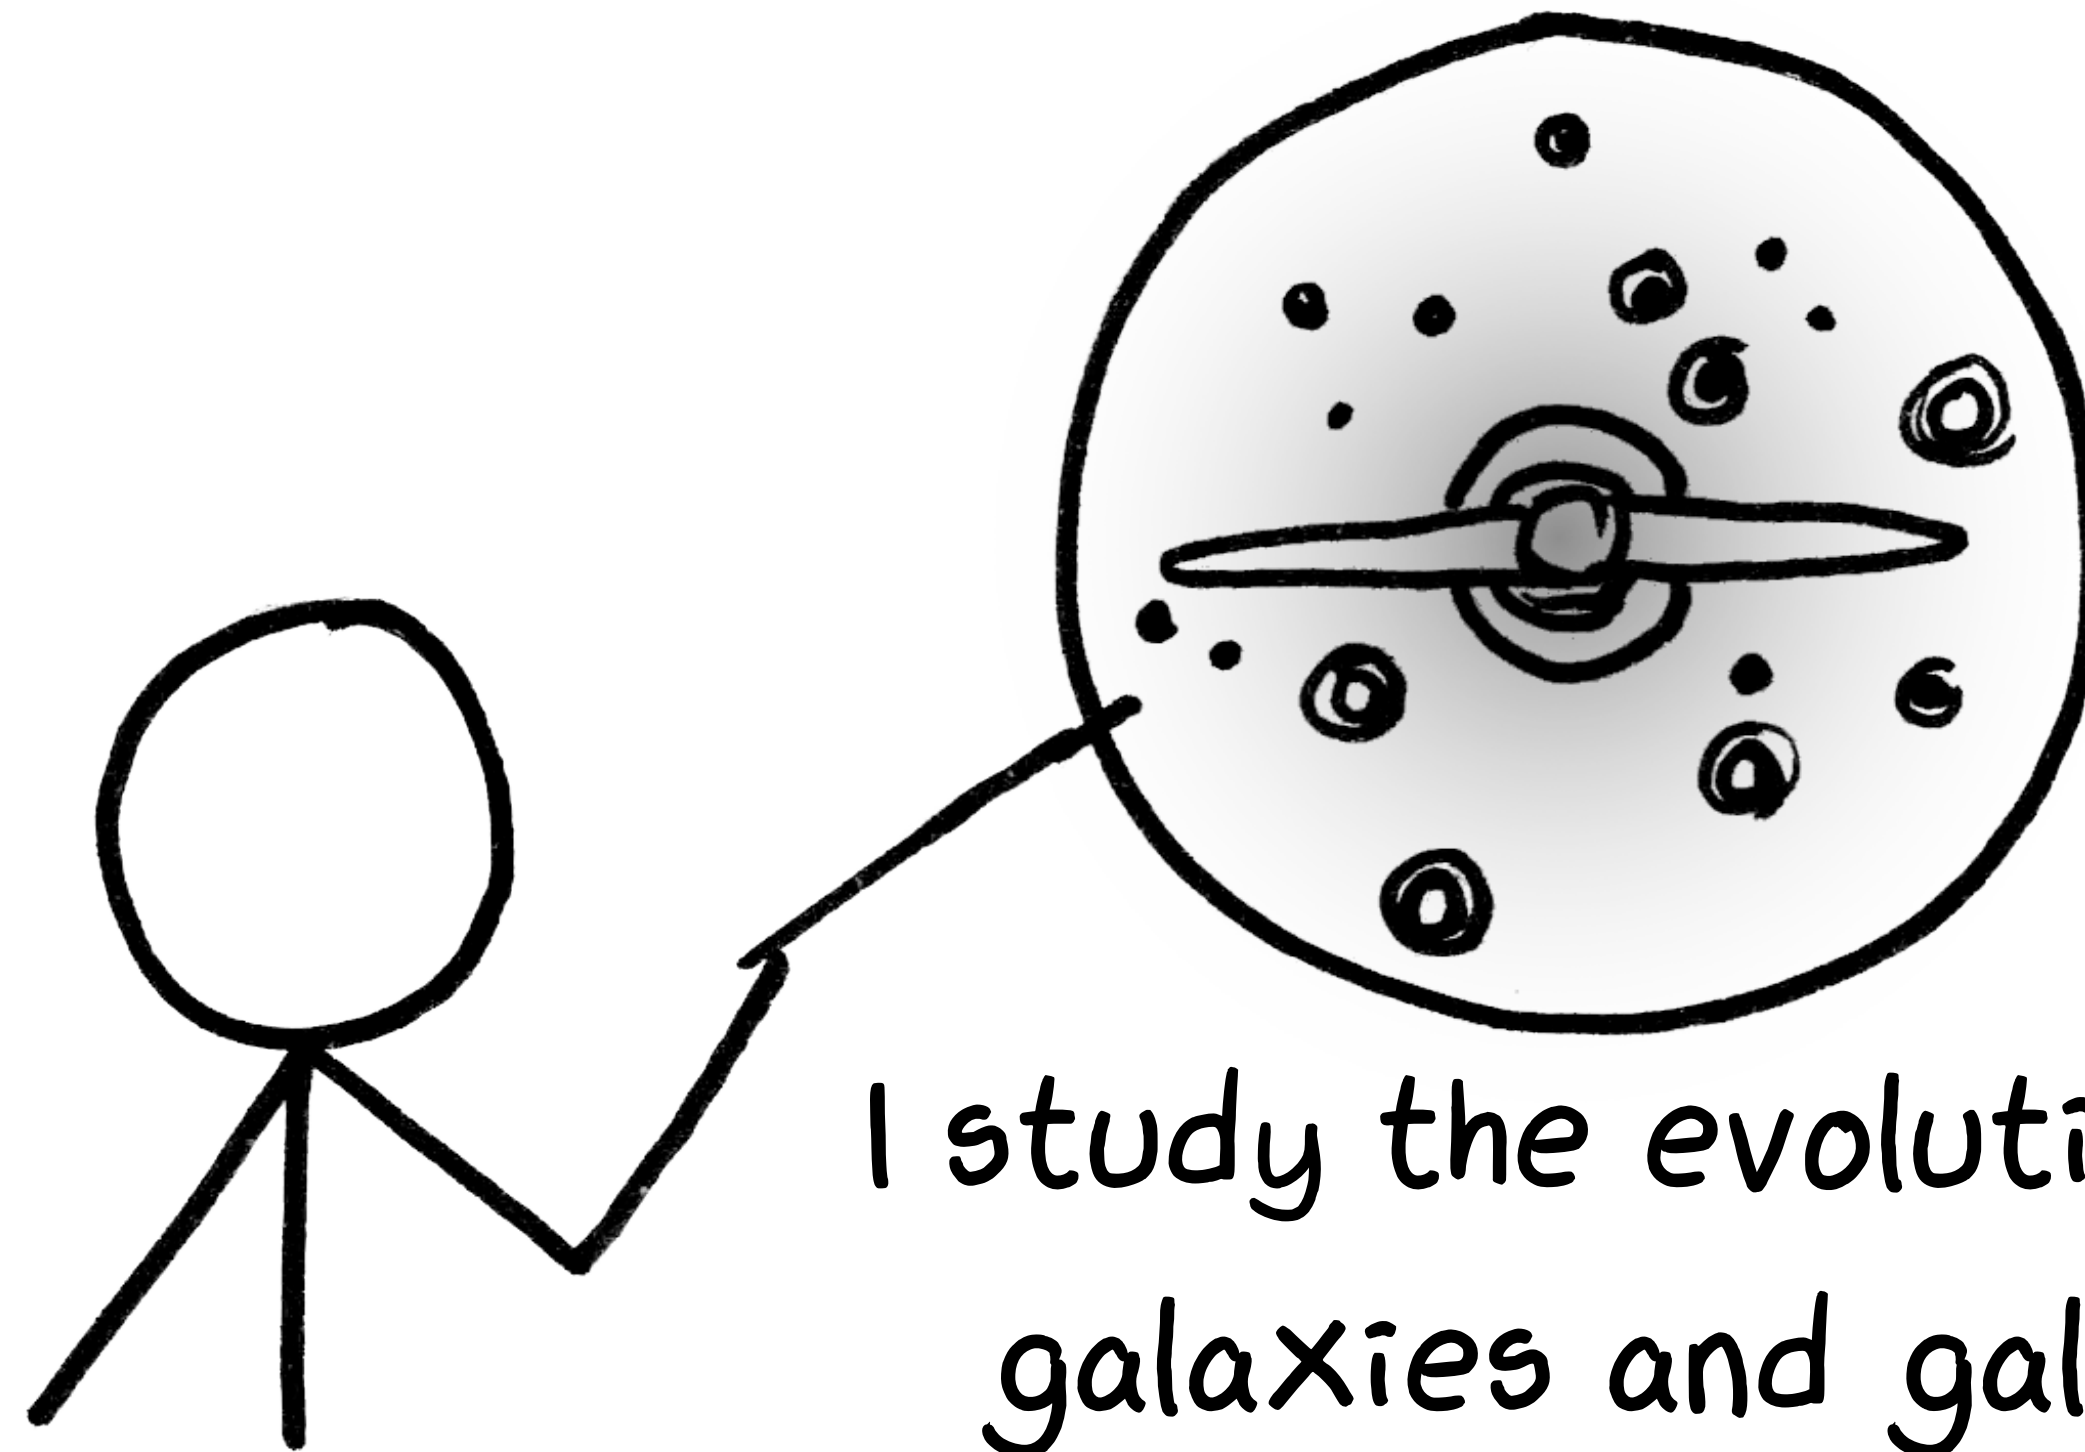

Observatoire de la Côte d'Azur, Nice, France

European Research Council  
Established by the European Commission

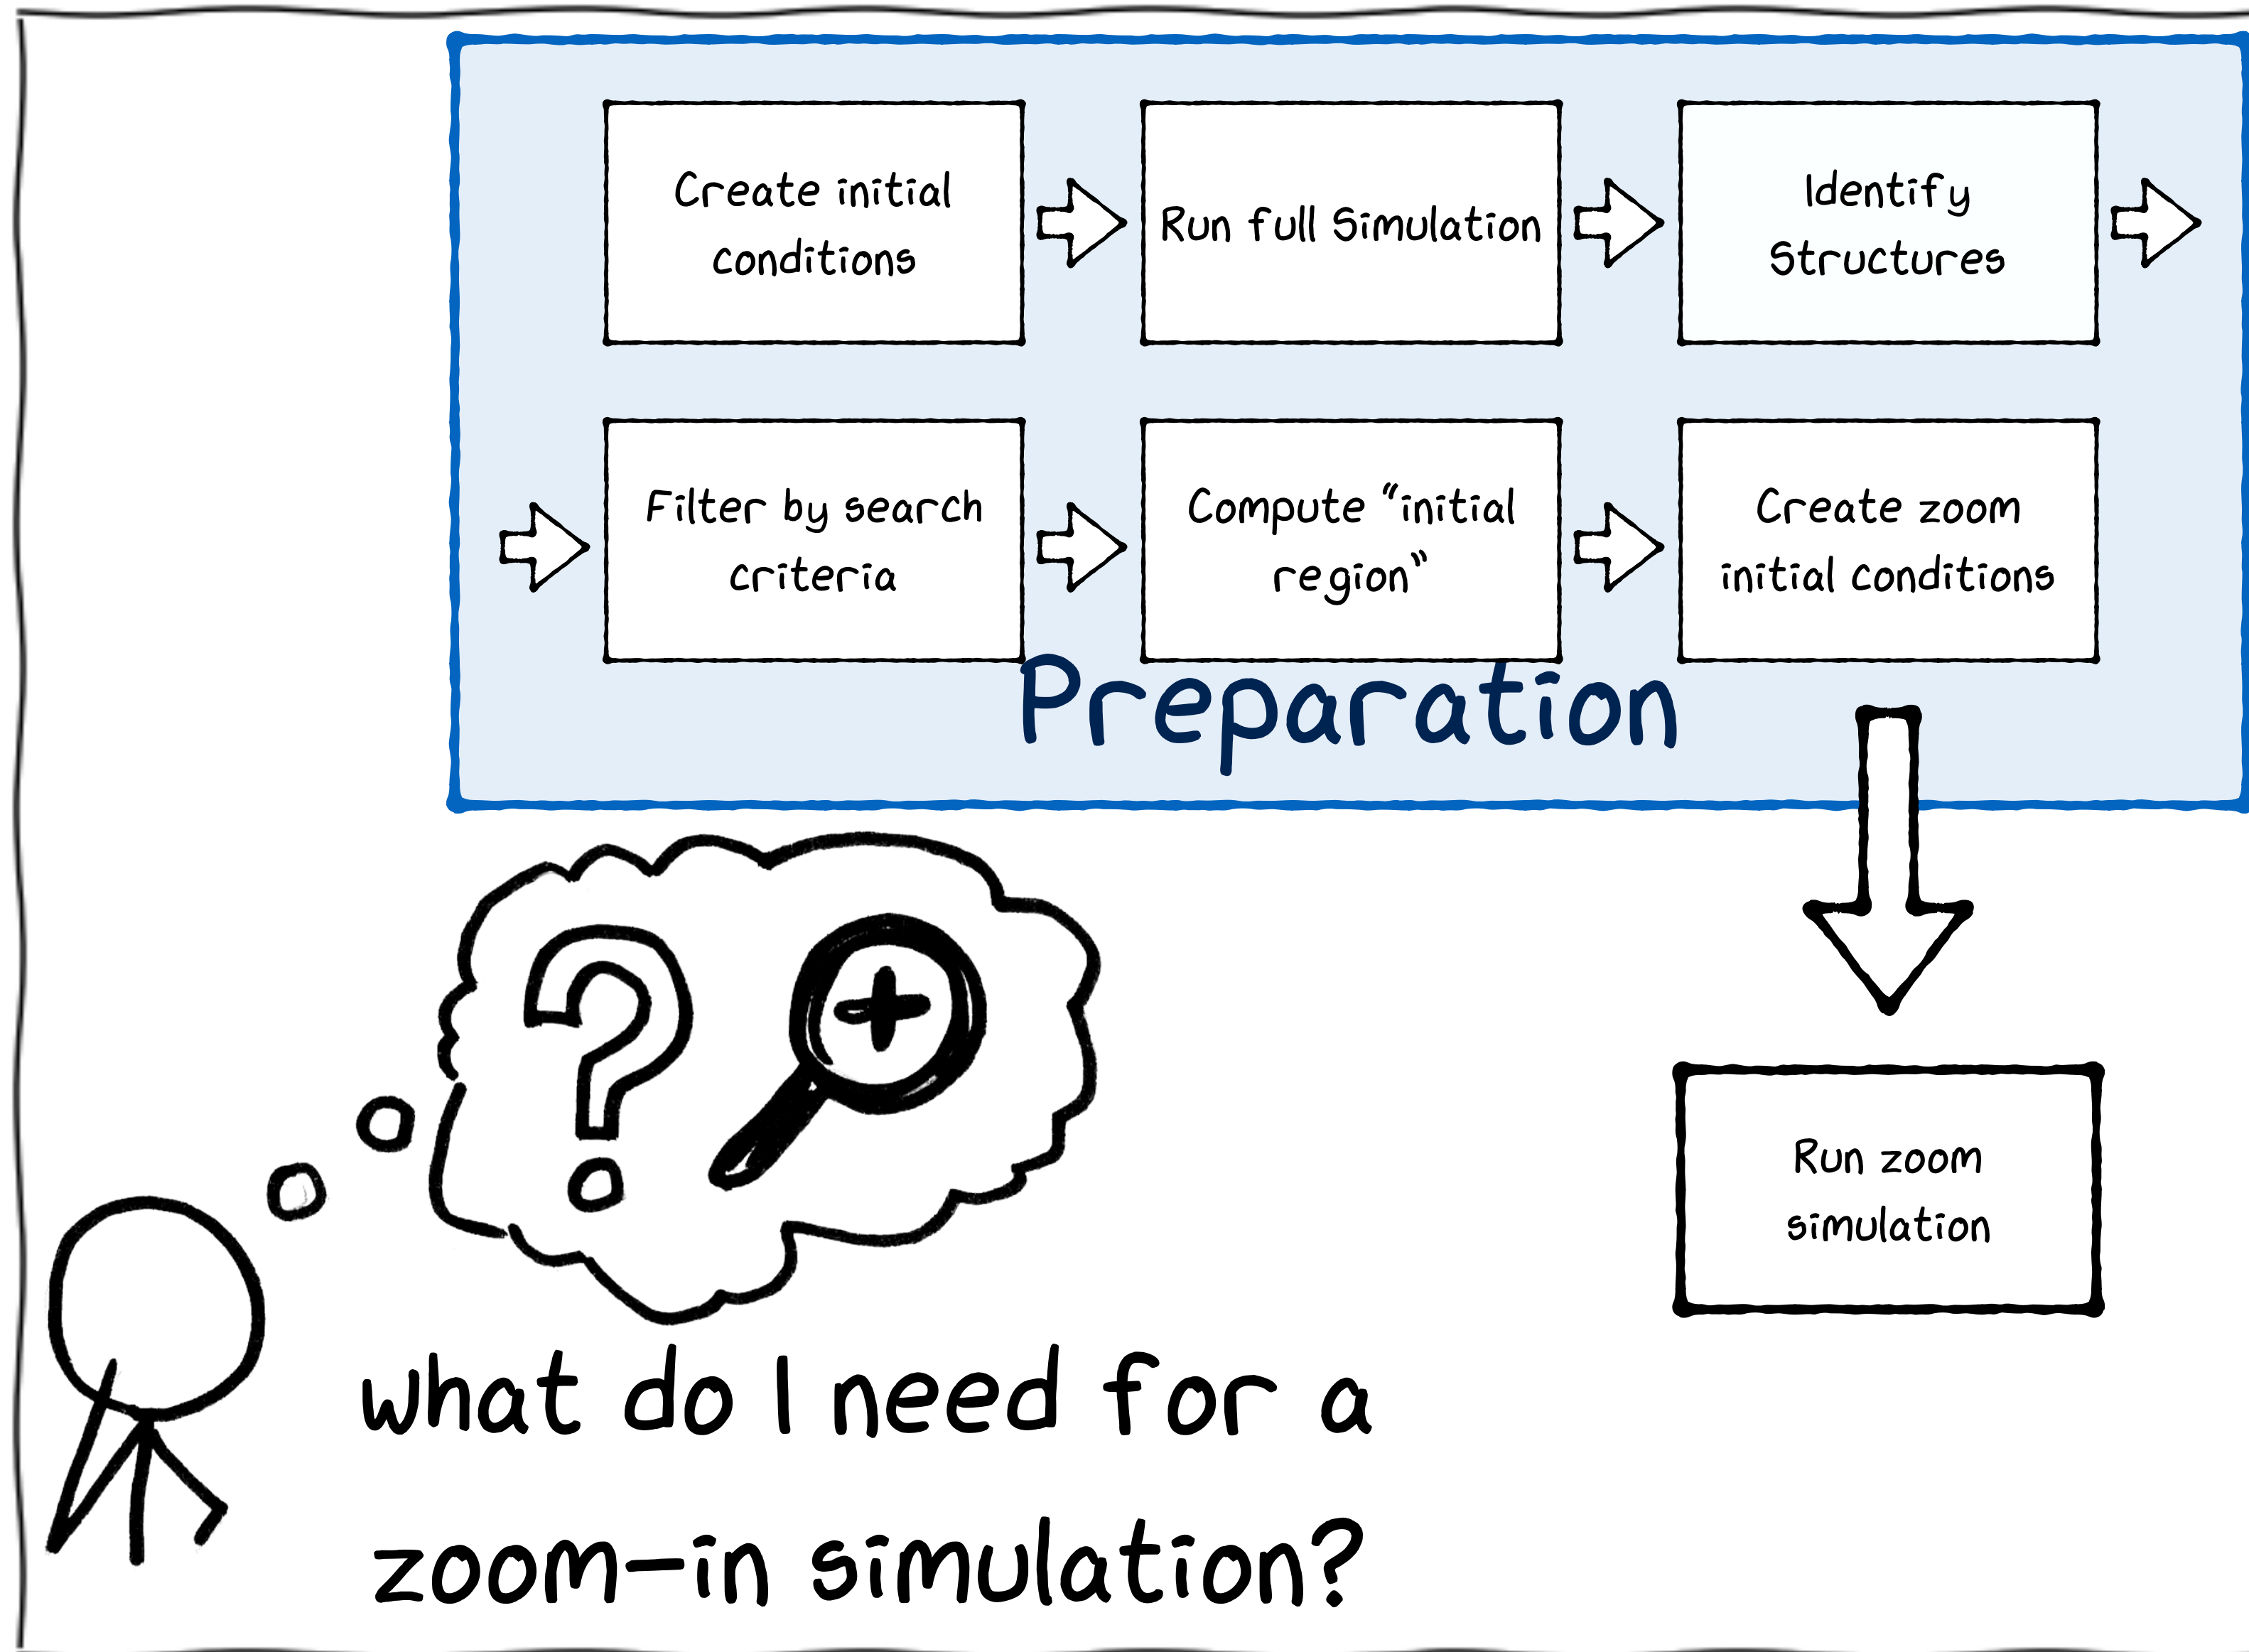

Hello, my name is Clusty.  
I am a cosmologist!

I study the evolution of  
galaxies and galaxy  
clusters!

For this, I use zoom-in simulations to both  
resolve large structures and small details.

EAGLE

HORIZON AGN

MILLENNIUM XXL

But other people have  
already done that!

EAGLE

HORIZON AGN

MILLENNIUM XXL

If only that data  
would be available ...

cosmicweb

# Scope of cosmlCweb

**Finding** the right objects to re-simulate

queryable / searchable halos with properties and merger-trees

**Obtaining** initial conditions for these objects

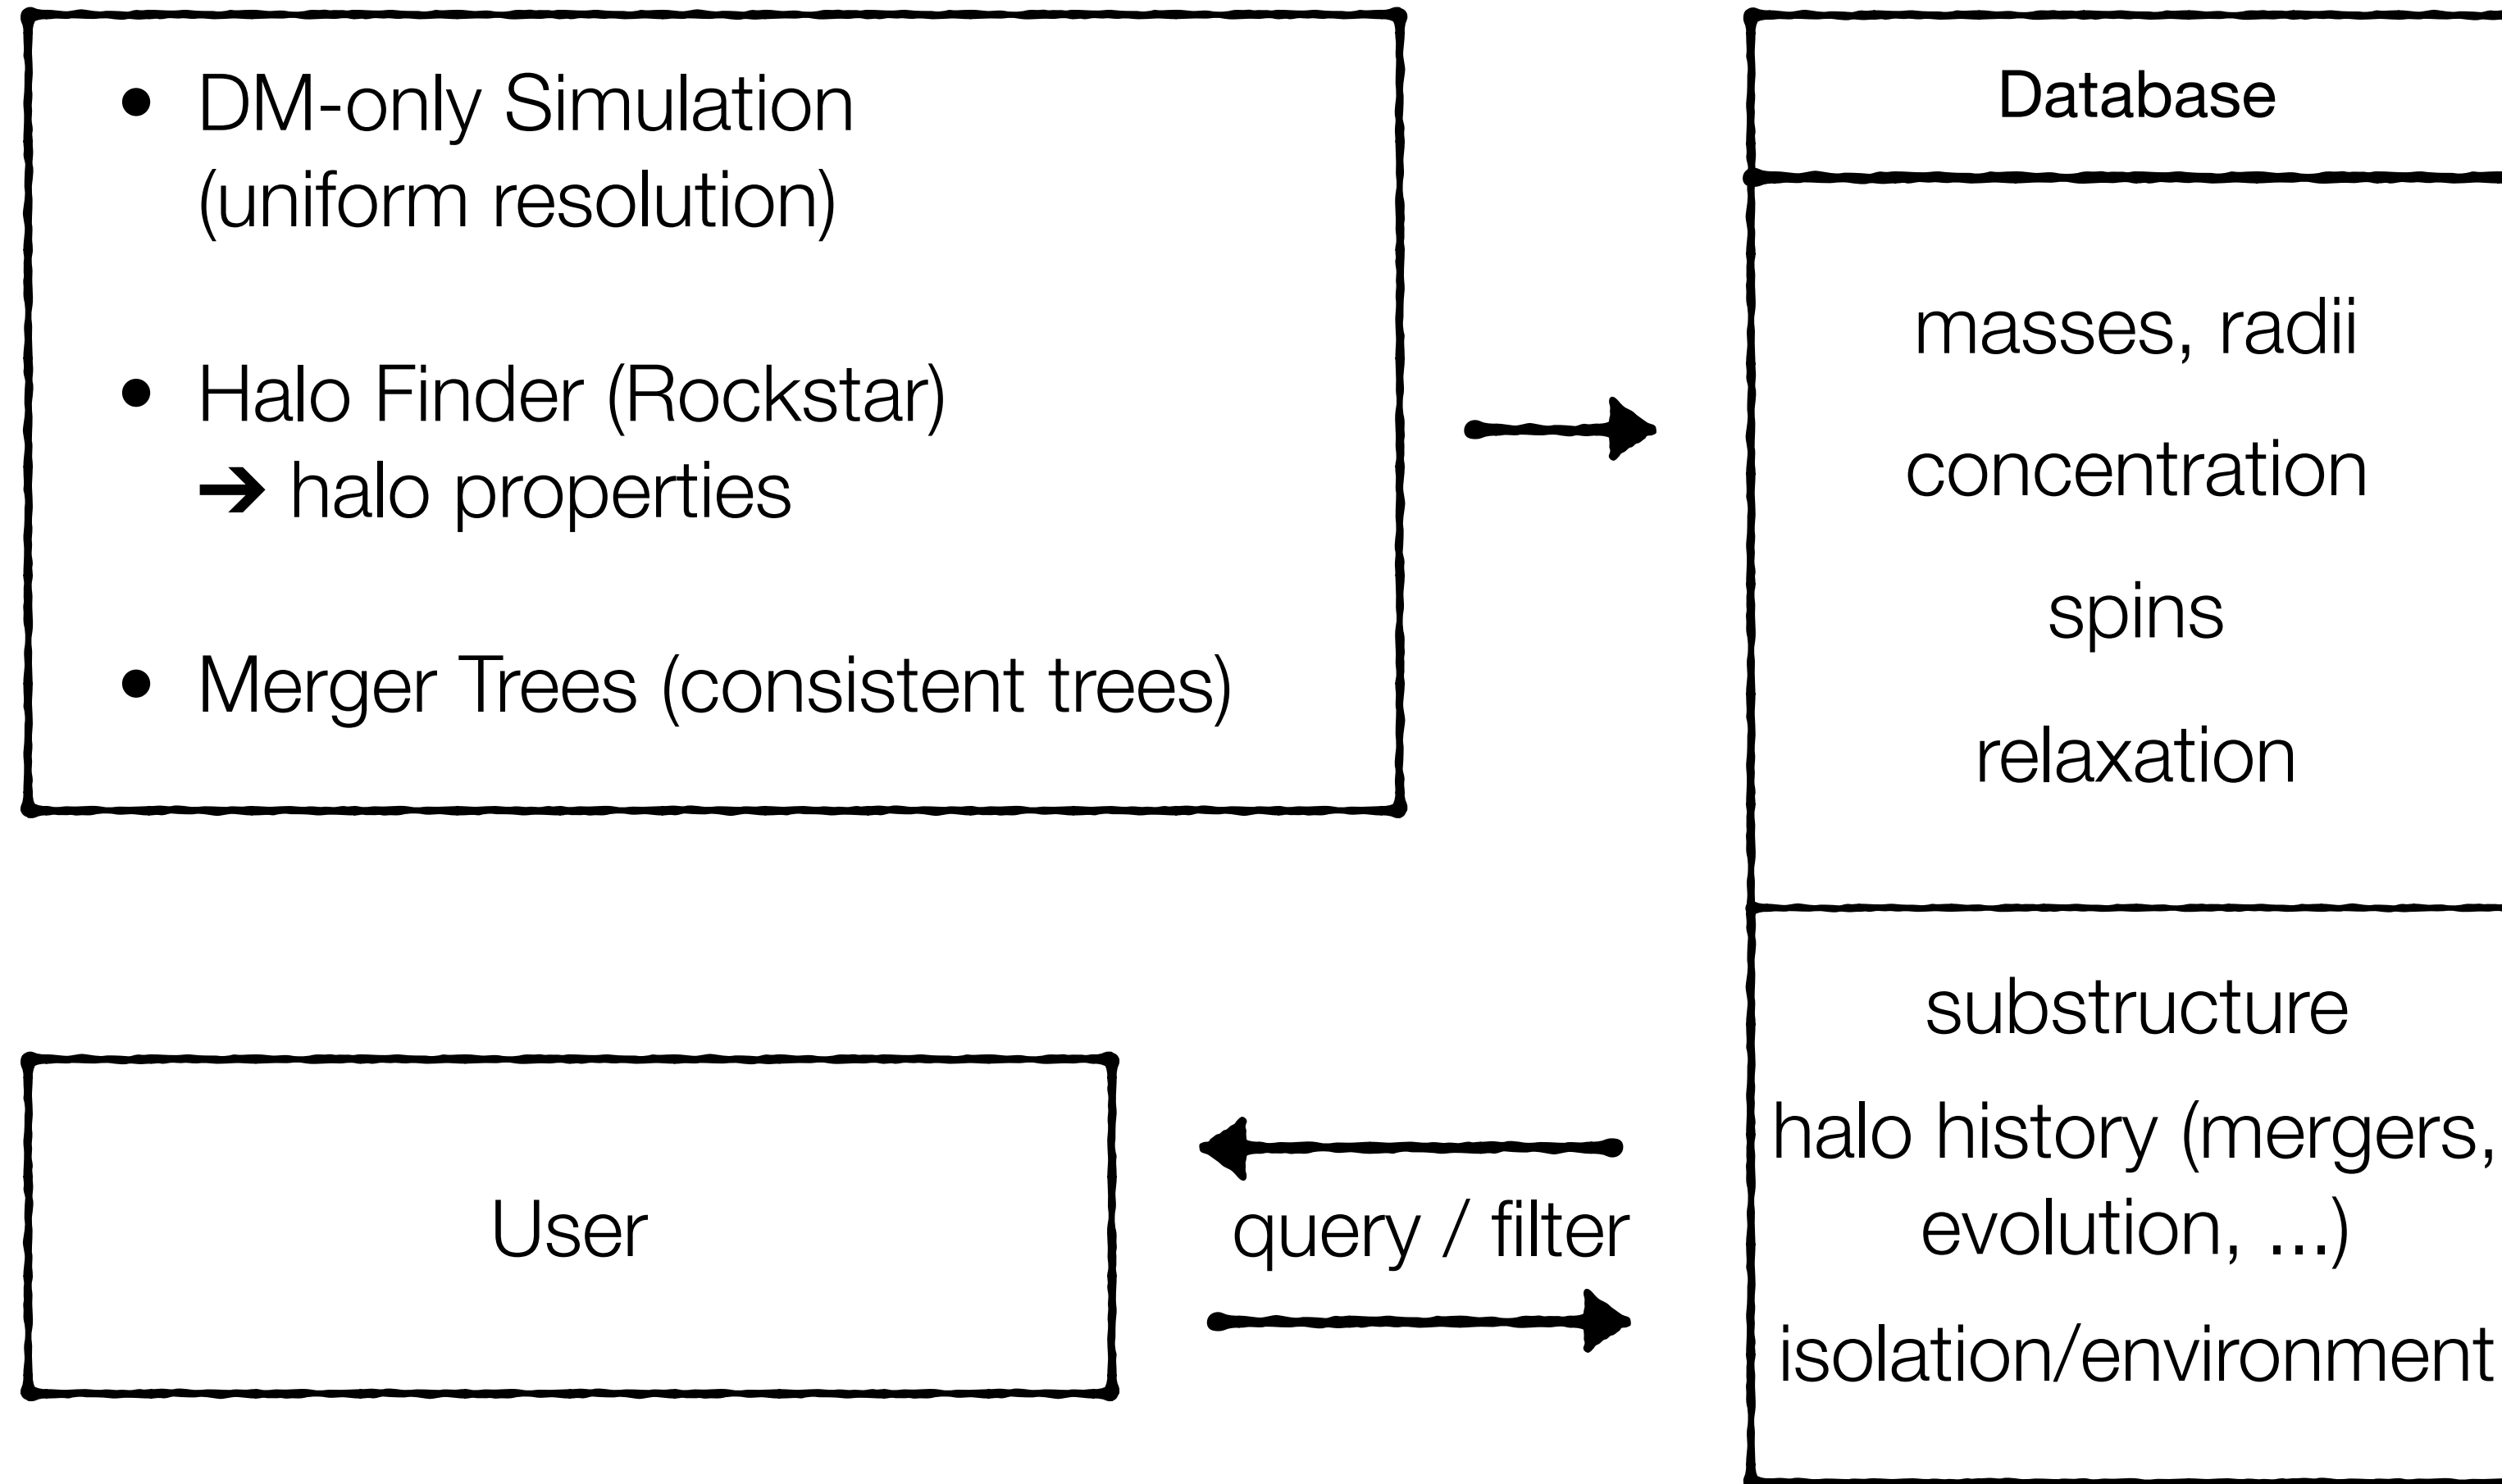

precomputed minimum-bounding ellipsoids of main halos

**batch processing** for statistical studies

**Referencing** objects in articles / papers

Allow users to tag halos and create link / DOIs

# 1. Finding Halos

# 2. Zoom Initial Conditions

minimum bounding ellipsoid

+ ICs of simulation

**MUSIC**

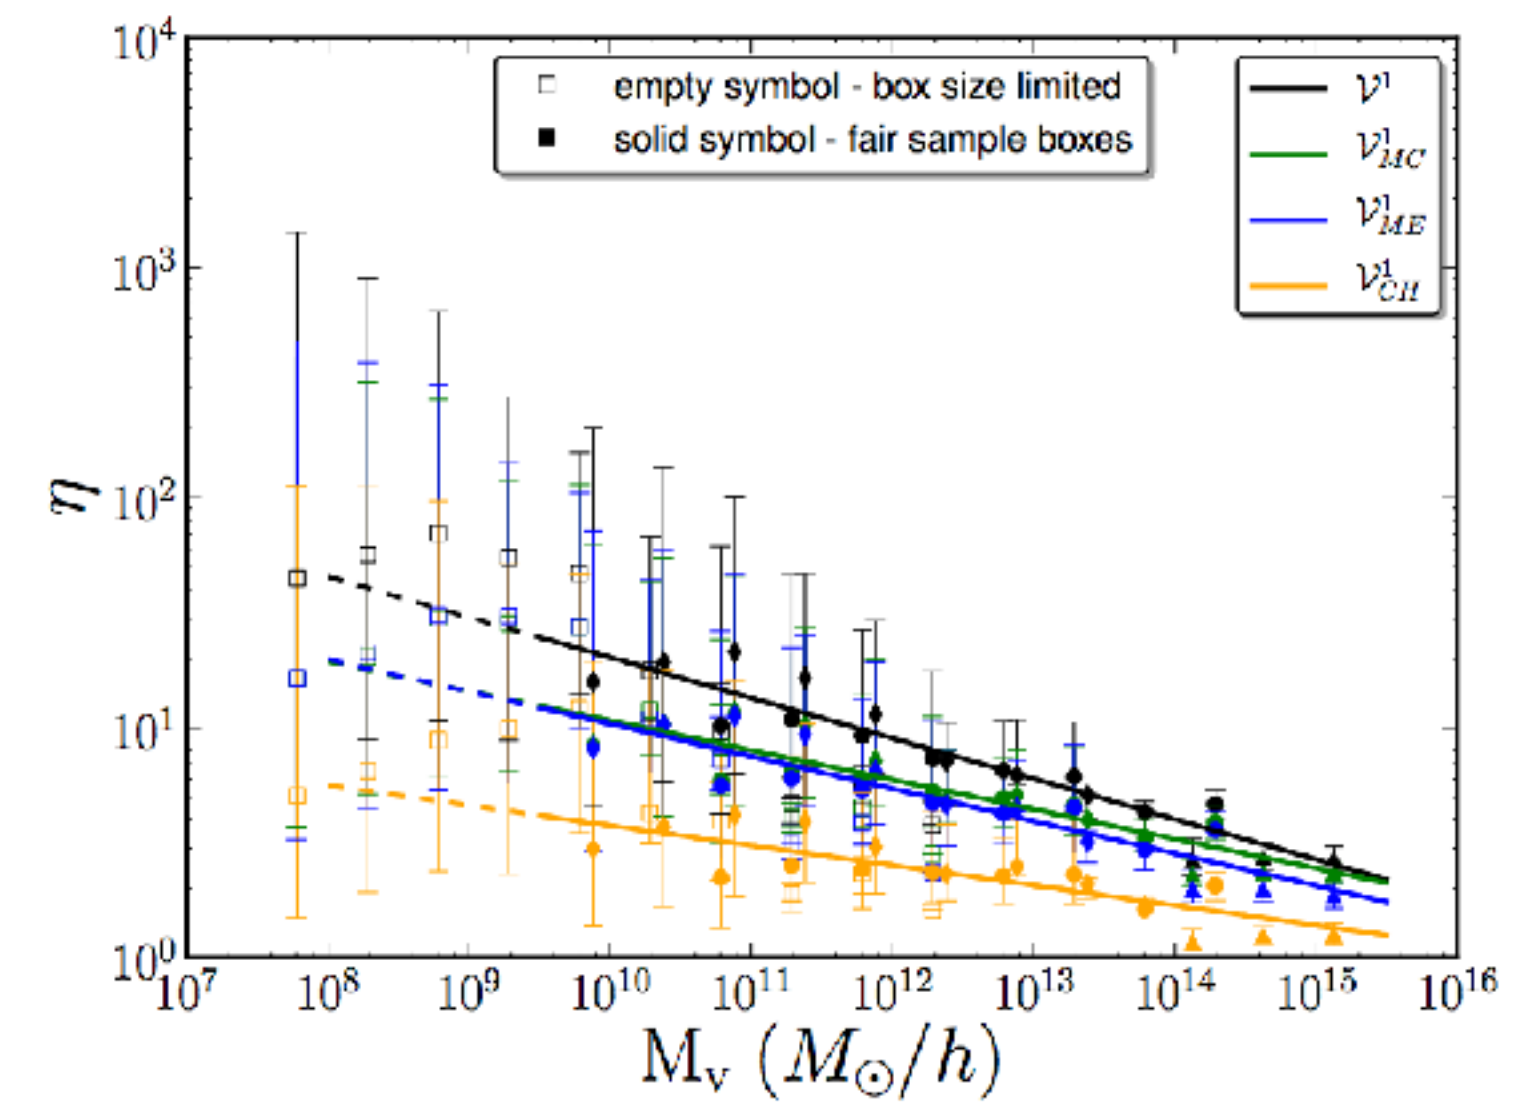

zoom ICs for various codes

# IC Ellipsoids

*Oñorbe et al. 2013*

$$\text{inefficiency } \eta = \frac{V_{\text{ellipsoid}}}{N_{\text{particles}}}$$

# IC Ellipsoids

300 Mpc box,  $m_p = 2.1 \times 10^9$   
 $4r_{\text{vir}}$  boundaries  
95% and 33% intervals

# Live Preview

what can possibly go wrong...

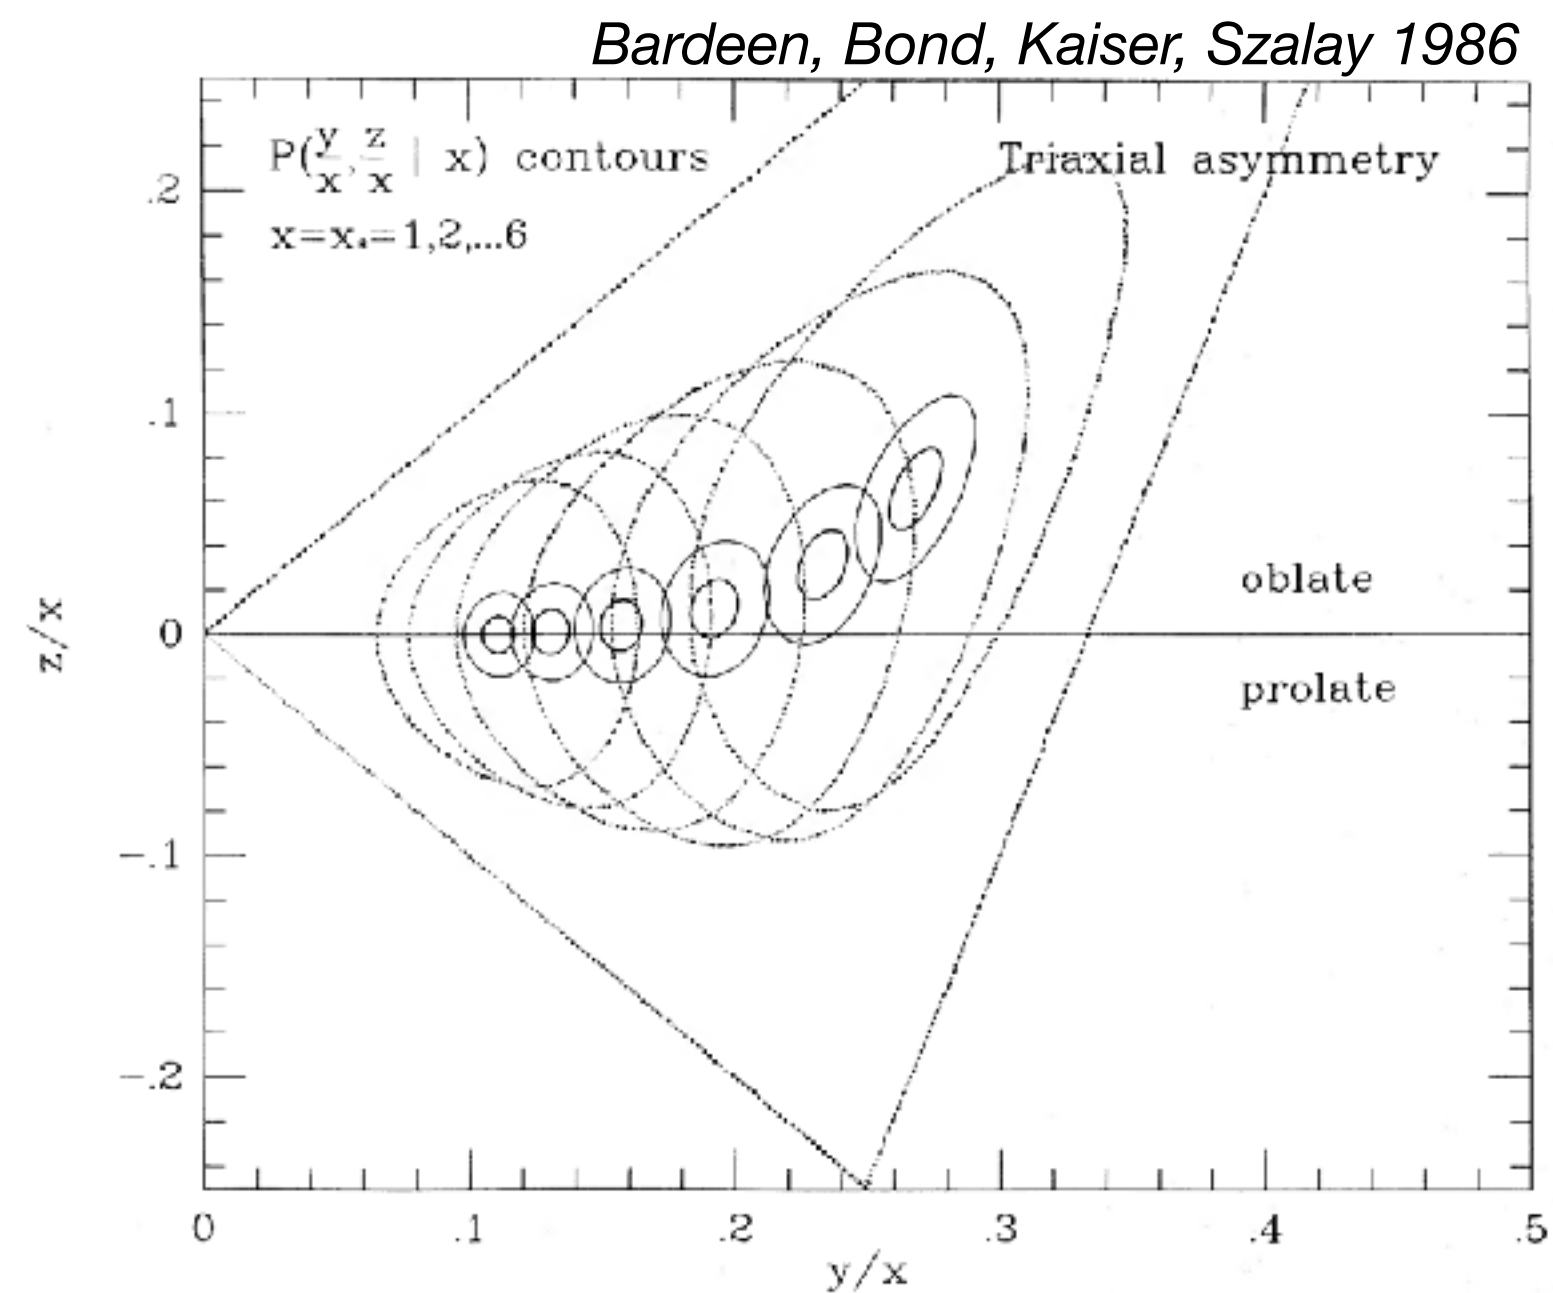

# Outlook

- ❑ Add more simulations!
  - ❑ VIRGO Consortium: Eagle (100 Mpc), P-Millennium (800 Mpc), Millennium XXL (4 Gpc)
  - ❑ HORIZON AGN (?)
  - ❑ FIRE simulations
  - ❑ local universe simulations by Jenny Sorce
- ❑ DOIs for references
- ❑ various documentation / UI / performance improvements
- ❑ integration with MUSIC 2.0

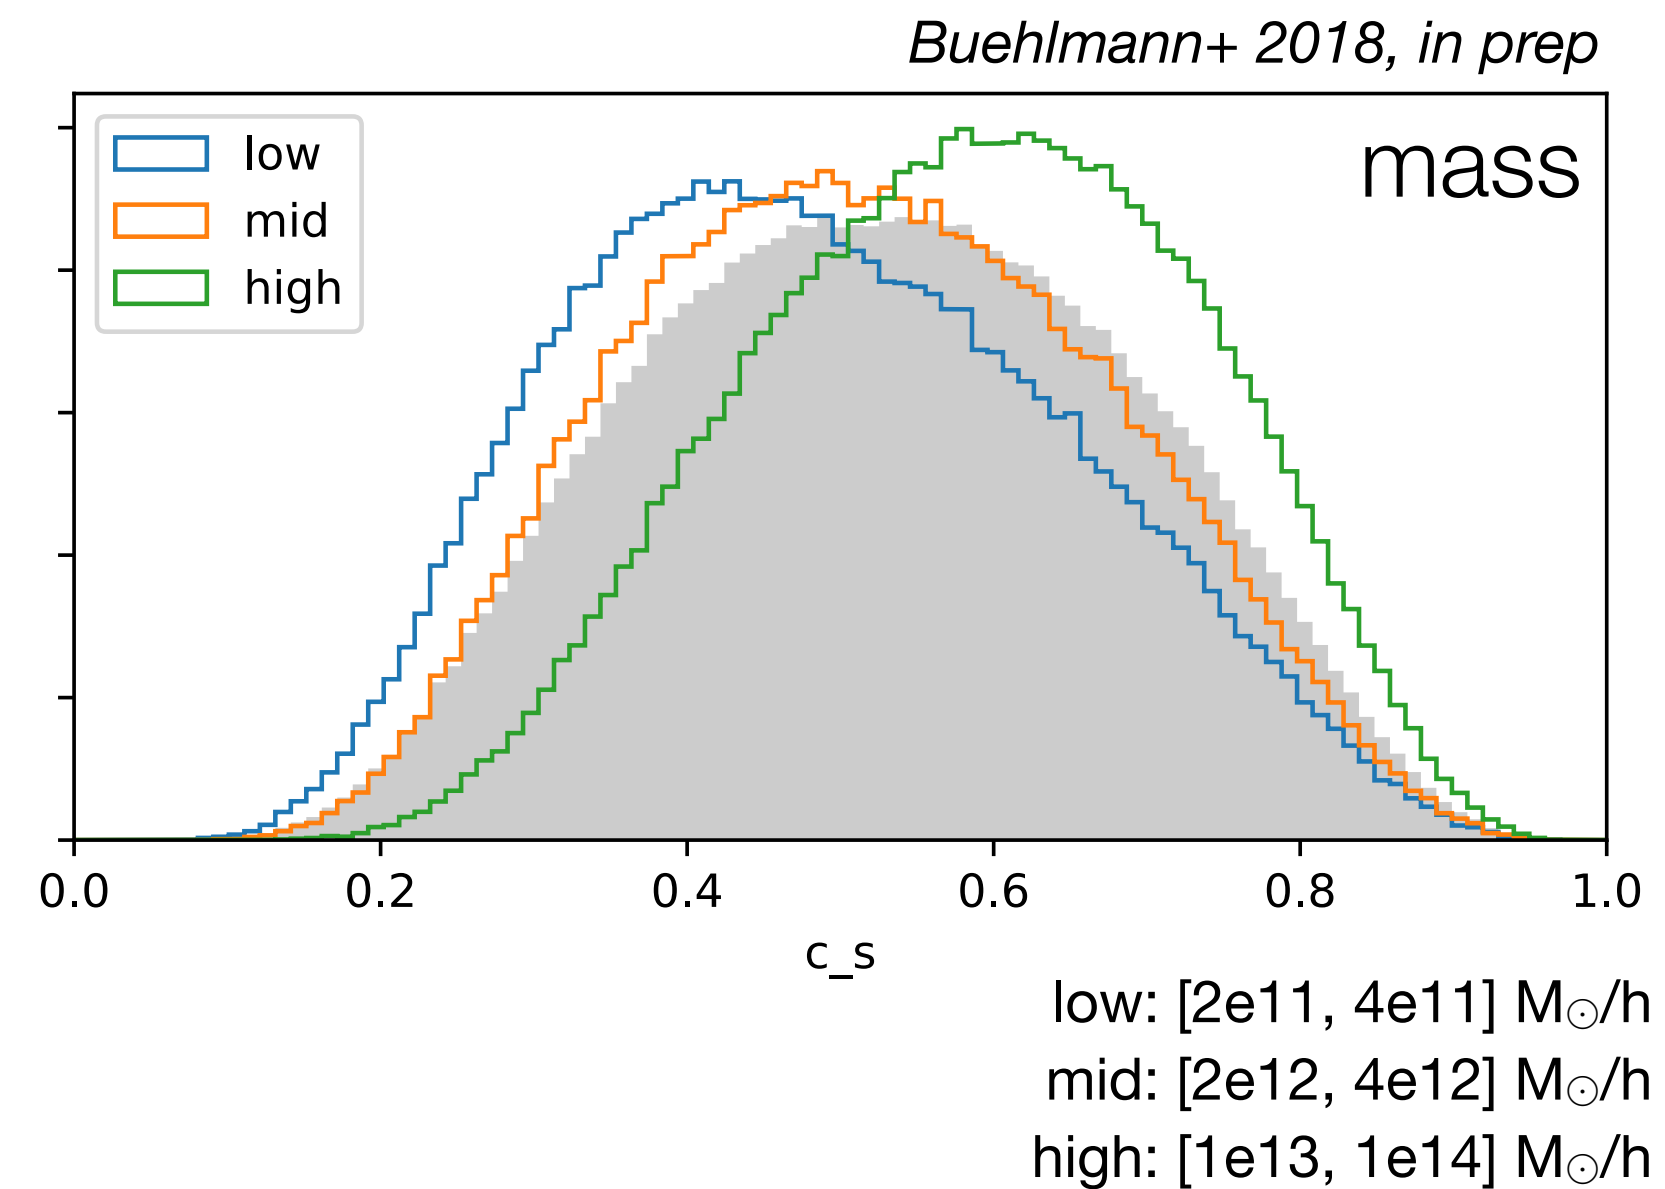

**Release:** end of this year

Feedback / ideas are more than welcome!  
Interested in **testing / trying out?**

# Proto-halo statistics

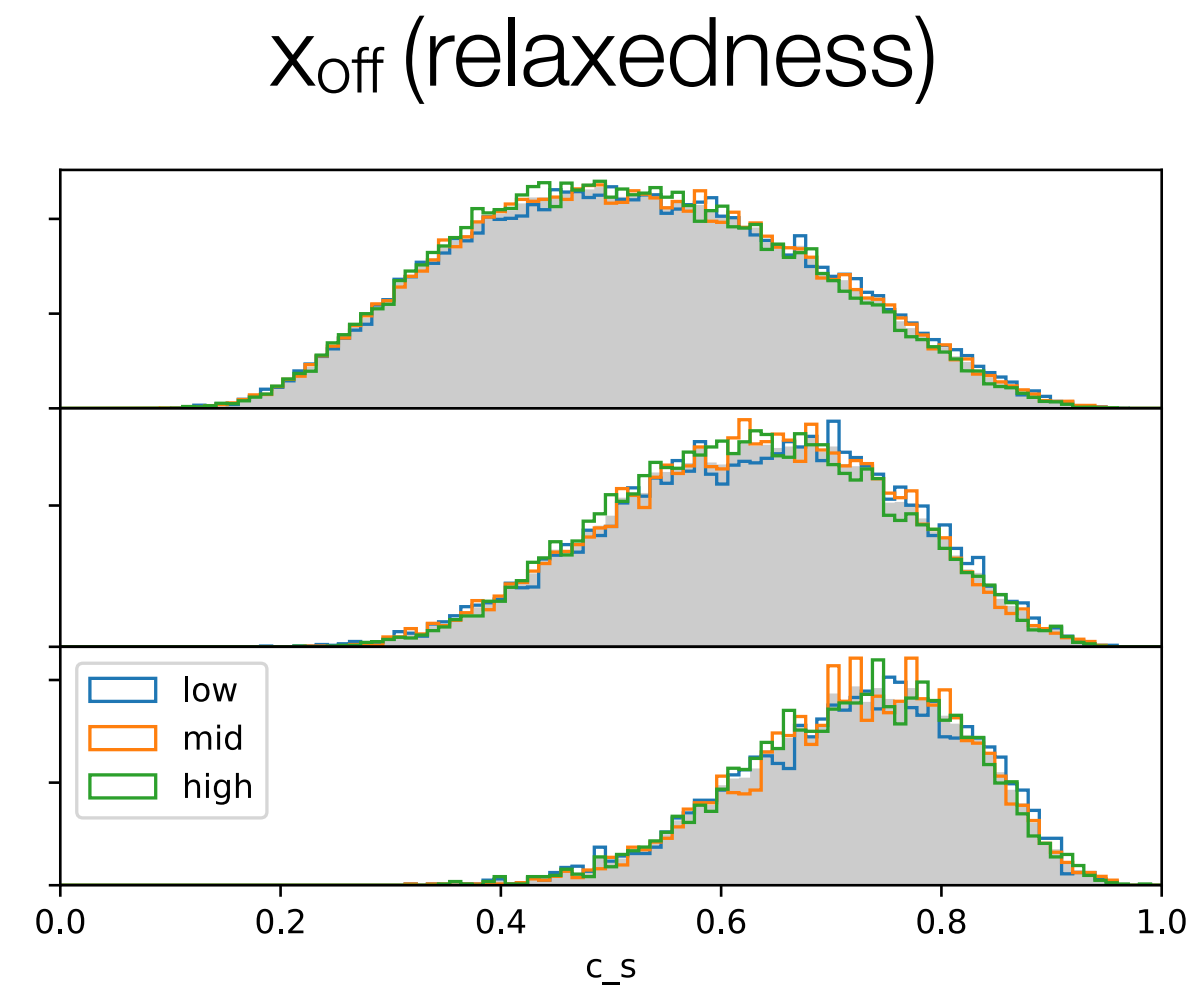

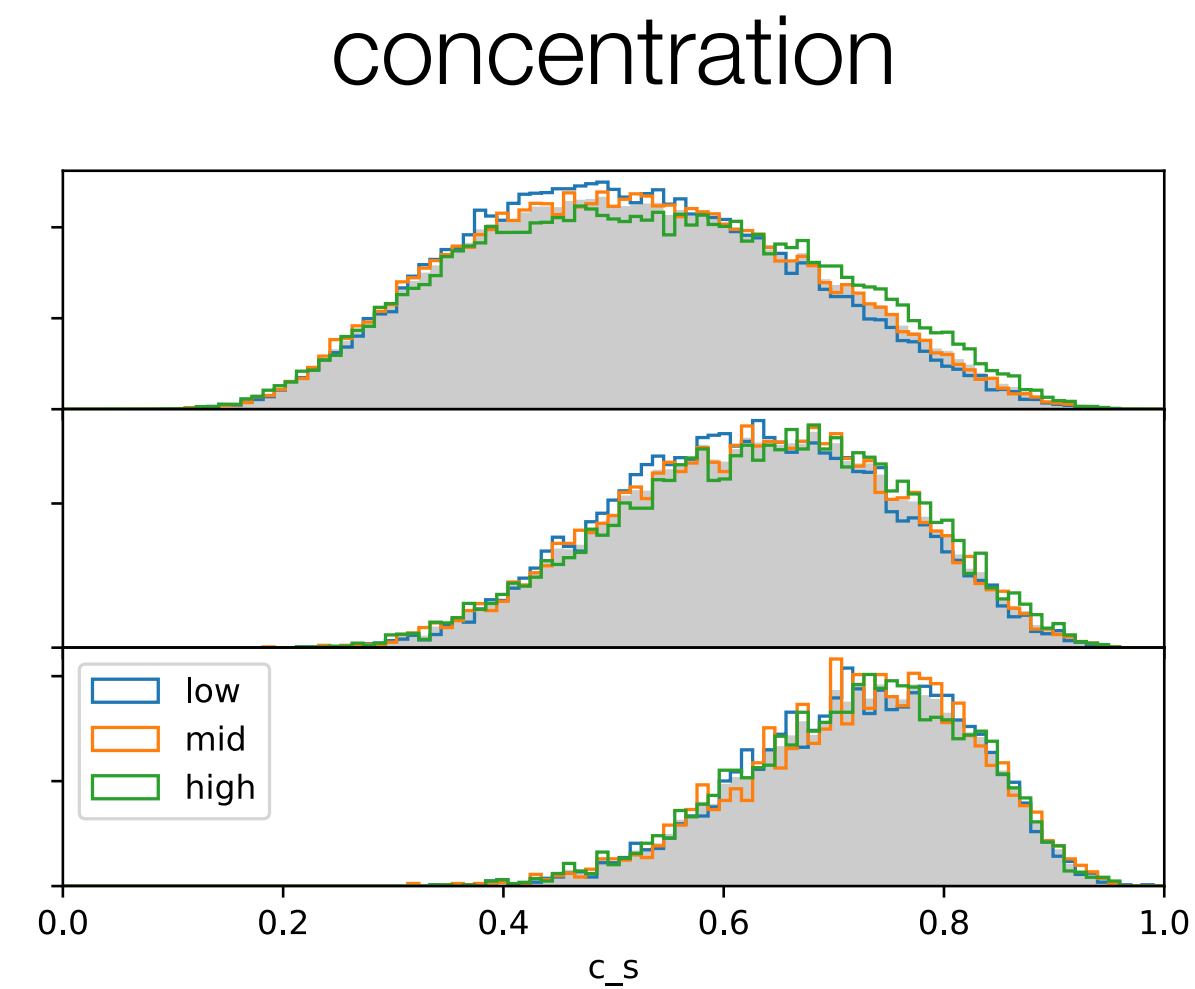

Ellipticity of peaks in a Gaussian random field

sphericity: 
$$c_s = \frac{3a_3}{\sum a_i}$$

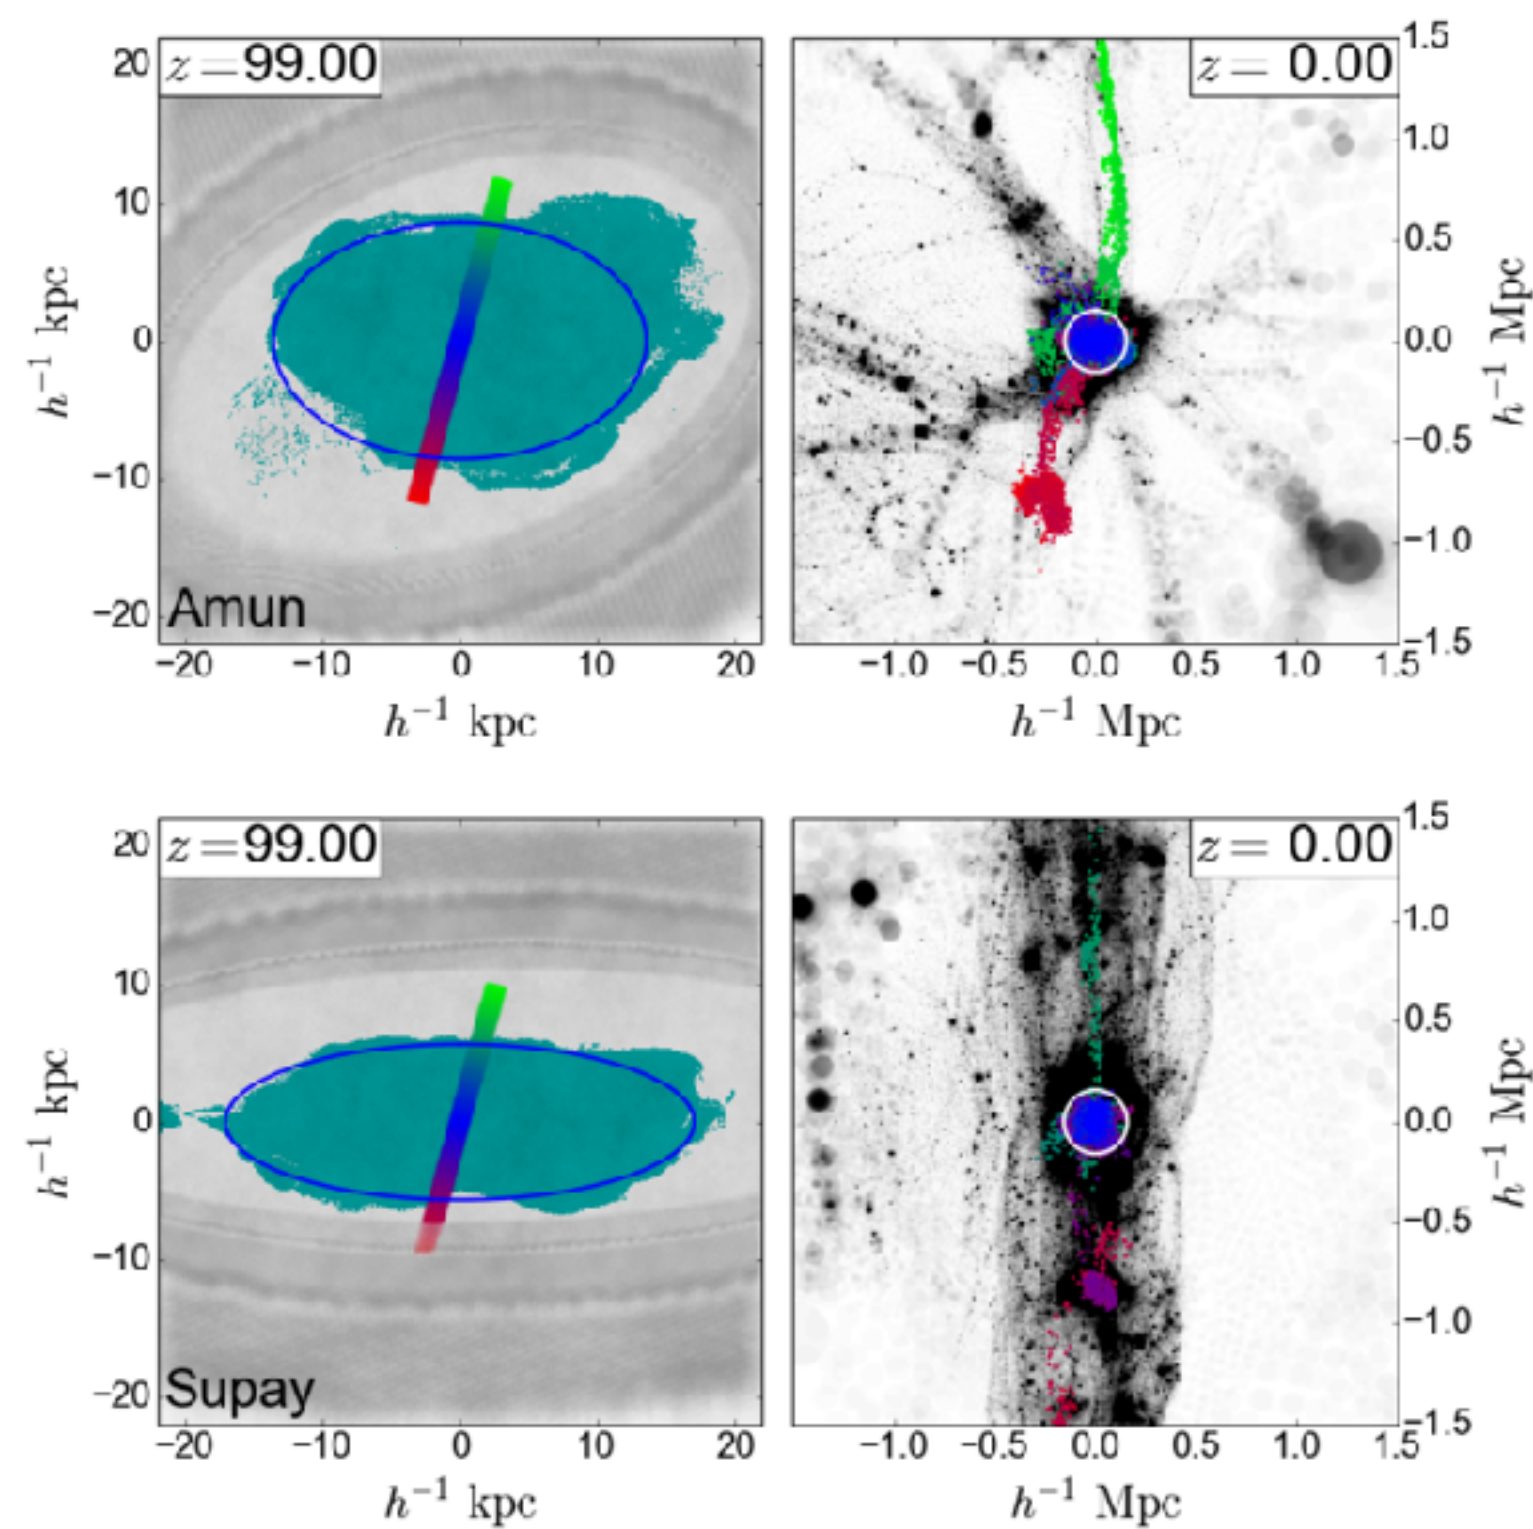

# Proto-halo statistics

sphericity: 
$$c_s = \frac{3a_3}{\sum a_i}$$

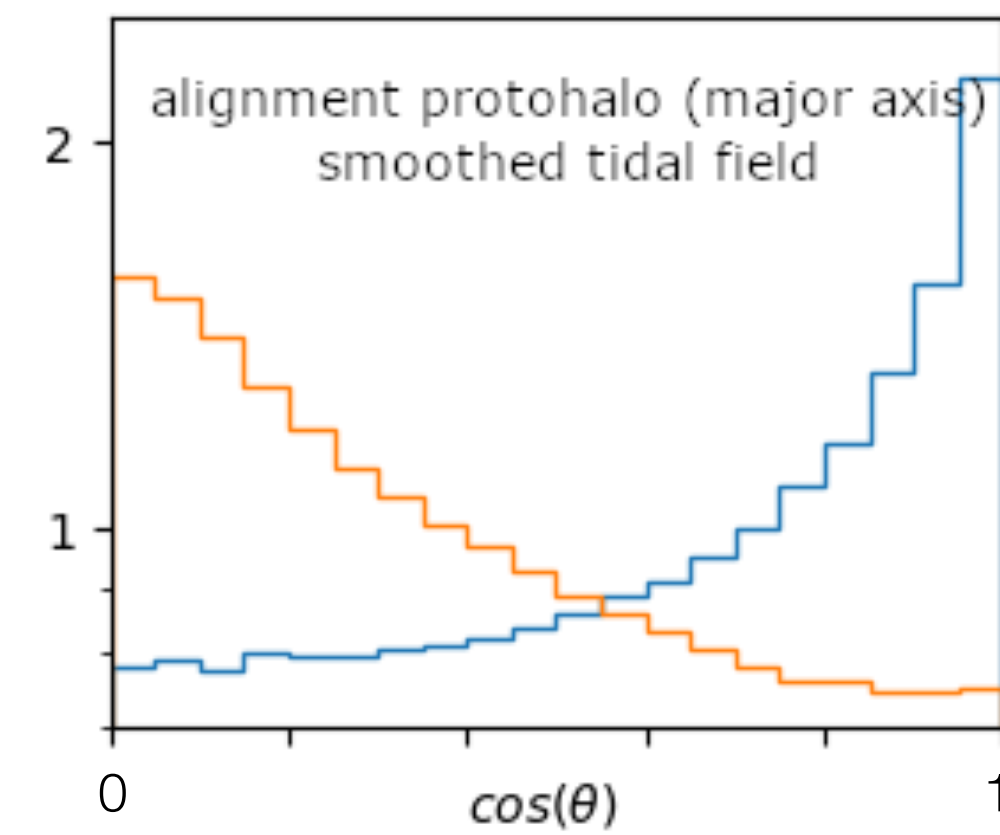

shown are the lower, mid, and upper third of the property parameters within each mass bin.

# Proto-halo alignments

*Borzyszowski, Poricani et al. 2016*

Alignment of the proto-halo major axis with the tidal field (blue: major axis, orange: minor axis)

*Buehlmann+ 2018, in prep*

# Proto-halo alignments

Marked correlation function:

$$M(r) = \frac{\sum m(\mathbf{x})m(\mathbf{y}) \cdot I(|\mathbf{x} - \mathbf{y}| - r)}{\bar{m}^2 \sum I(|\mathbf{x} - \mathbf{y}| - r)}$$
